Bird Sound Bytes Build 50

Please note:

Running alpha software requires computer skills beyond the average user. During development, many changes occur from build to build. Some files may need to be edited and a good knowledge of your computer is required. If your computer does not have up to date data services, you may need to install the MDAC_TYP.EXE program found in the UTIL directory on the CD. If Windows requires DCOM95 or 98, it is in the UTIL directory as well.

The finished product will install without any of the above problems.

To install Bird Sound Bytes, go to START / RUN

Browse your CD drive and double click on SETUP.EXE

When complete, you run the program by going to START / PROGRAMS / BIRDS and click on Bird Sound Bytes.
The CD must remain in the player while using the program.

After you select the region, you can widen the grid showing description by catching the title divider and moving it and opening that field. When you click on a listed bird, its photo will appear. If there is a song it will begin playing when you either double click the description or clicking on the Song button. The memo button is disabled currently.

Alpha notes:

If your CD is not your D drive, you will need to edit the BSB.INI file. To do this, using your Windows Explorer, locate this file in C:\Program Files\Birds When you click on it, notepad will load the file. As a default, it will have a single letter in it D ... remove this D and replace it with the letter representing your CD drive letter. This is only req'd to be done once.

There may be some problems with libraries not being registered during installation. If you receive an error ' Class not registered ', please forward an email giving me the error number reported in the error box. I will forward you instructions for fix.

When finished testing, you can do an uninstall from START / SETTINGS / CONTROL PANEL / ADD/REMOVE PROGRAMS.
